#### **AGREEMENT**

#### **PREAMBLE**

The Government of the Democratic People's Republic of Korea, hereinafter referred to as Government, and the United Nations Children's Fund, hereinafter referred to as UNICEF, sharing the aim of furthering their mutual agreement and cooperation for the realization of the rights expressed in the Convention on the Rights of the Child for all children in the Democratic People's Republic of Korea, during the period from 1 January 2004 to 31 December 2006, declaring that these responsibilities shall be fulfilled in a spirit of friendly cooperation,

HAVE AGREED AS FOLLOWS:

#### ARTICLE 1: Basis of relationship

The Basic Cooperation Agreement signed between the Government and UNICEF on 28 October 1996 provides the basis for their relationship. This Master Plan of Operations for the period 2004-2006 is to be interpreted and implemented in conformity with the Basic Cooperation Agreement.

This Master Plan of Operations is understood to comprise the Articles wherein the general policies, priorities, objectives, strategies, responsibilities and commitments of the Government and of UNICEF, as well as the related resource allocations are described, and the annexes thereto: summary results matrix, integrated monitoring and evaluation plan, programme results matrices.

The programmes and projects described herein have been jointly formulated and agreed by the Government and UNICEF.

This Master Plan of Operations for the period 2004-2006 supersedes all previous plans of operations.

#### ARTICLE 2: The situation of children and women

The Democratic People's Republic of Korea has a population of approximately 23 million, 2 million of whom are children under five years of age. A majority (over 60 per cent) live in urban areas, reflecting the traditional industrial base of the economy.

The Democratic People's Republic of Korea became a State Party to the Convention on the Rights of the Child in 1990 and to the Convention on the Elimination of All Forms of Discrimination against Women in 2001. It has an impressive body of laws committing the State to the realization of children's and women's rights.

The economy of the country suffered significantly from the dissolution of the socialist bloc that provided a market for its industrial goods and was a source of cheap and subsidized raw materials, including fuel. Combined with widespread natural disasters in the mid-1990s and limited interaction with the world economy, this led to a sharp economic downturn seriously constraining the Government's ability to feed and care for its people. Following an appeal to the international community in 1995, the country has benefited from much-needed large-scale humanitarian relief.

According to government figures, from 1993 to 1998, GNP declined from US\$ 991 to US\$ 457; the infant mortality rate increased from 14 to 24 per 1,000 live births and the under-five mortality rate from 27 to 50 per 1,000 live births. This increase in child mortality resulted from acute food shortages, combined with heightened morbidity and reduced capacity of the health system to manage childhood illness caused by a severe shortage of essential drugs and general degradation of health infrastructure and water and sanitation systems. The main causes of child deaths are diarrhoea and acute respiratory infections, with malnutrition an important underlying cause.

According to a 1998 survey, the prevalence of acute malnutrition (wasting) among children aged under seven years was 16 per cent; the prevalence of chronic malnutrition (stunting) was 62 per cent.

The 2002 nutrition assessment shows an improvement in adjusted prevalence for the same indicators to 9 and 42% (39% survey prevalence), respectively. This improvement may be attributed in part to the substantial humanitarian assistance provided by the international community, as well as to the increase in food production due to more favourable climatic conditions and international assistance in agriculture. Child malnutrition is worse in the north-eastern provinces than in the rest of the country, as is true for most child development indicators.

Immunization rates have increased sharply since 1998, providing better protection for children from disease. A 1998 survey found coverage for three doses of combined diphtheria-pertussis-tetanus vaccine (DPT3) at 37 per cent and for measles at 34 per cent. Ministry of Public Health figures in 2002 show coverage of 67 and 86 per cent, respectively, for the same vaccines. Polio eradication activities have been very successful, with around 95 per cent of children under five years old receiving two doses of oral polio vaccine each year for the past six years. Over the past five years, a similar percentage of children aged six months to five years have received twice yearly vitamin A supplementation.

Women form almost half of the total labour force, so practically all children are enrolled in nurseries from the age of three months to four years and go on to kindergartens during their fifth and sixth years. The level of care provided to young children has deteriorated due to shortages of food, fuel for heating and other supplies.

Primary and secondary schooling in the Democratic People's Republic of Korea is free and compulsory, and all children up to the age of 17 years are enrolled. Much effort and dedication, particularly on the part of teaching staff, have gone into maintaining the standard of education. However, economic difficulties have resulted in shortages of textbooks, school materials and fuel for heating during the long sub-zero winters. In some instances, attendance has thus become intermittent. Learning methods have not evolved in step with international developments.

HIV/AIDS has not yet impacted the country. Officially there are no cases, and vigilance is quite high. Nevertheless, it is unlikely that the epidemic sweeping Asia will pass any country by, and preventive measures, especially adequate information to young people and others will be needed urgently. Child labour and other forms of exploitation are illegal, and there are no recorded instances in the country. The Government places a high priority on vigilance to ensure that child exploitation issues do not arise.

Women have equal status with men in law. Working women also have responsibili5y for household duties. The 2002 nutrition assessment found that 32 per cent of the mothers examined were malnourished and important factor contributing the continuing very high level of stunting in children. The maternal mortality ratio was estimated to be 105 per 100,000 live births in 1998 despite low fertility and the high average age of women at marriage (24-26 years).

For the country to exit from its humanitarian emergency, extensive development cooperation is needed alongside the humanitarian assistance that is vital to assure the survival, growth and development of children. Without reducing humanitarian assistance, more needs to be done to build the capacity for development, which will also increase the effectiveness of humanitarian aid. Such cooperation is, however, constrained by political factors limiting the involvement of most donors to the humanitarian sphere.

#### ARTICLE 3: Key results and lessons learned from previous cooperation, 2001-2003

#### Key results achieved

The 2001-2003 country programme benefited from generous contributions, mostly through the Consolidated Appeal Process (CAP) from the Governments of Australia, Canada, Denmark, Finland, Italy, the Netherlands, New Zealand, Norway, the Republic of Korea, Sweden and the United Kingdom; the European Commission Humanitarian Office; Kiwanis International; the German, Korean and United States Committees for UNICEF; and others. It was, however, always under funded.

UNICEF, in close partnership with the World Health Organization (WHO), provided vaccines, vaccination and cold-chain equipment, and training to the national immunization programme. This

helped to achieve the increased vaccination coverage noted above, although universal routine immunization is still a challenge. Factors to be resolved include planning and management and coldchain performance, especially given the formidable energy constraints, UNICEF and WHO, with major contributions from Rotary International and the United States Centers for Disease Control and Prevention, have supported highly successful National Immunization Days (NIDs) for polio eradication. With WHO support, improvements in acute flaccid paralysis surveillance show that polio is effectively eradicated, although certification will be done for the WHO South-east Asia region as a whole. Together with the International Federation of Red Cross and Red Crescent Societies (IFRC), UNICEF has provided essential medicines for all health institutions in the country, along with training and technical assistance, with the objective of reducing mortality, particularly from diarrhoea and ARI. UNICEF and WHO, with funding from Diakonie in Germany, have also supported the local production of five vital medicines. Limited funding has constrained the regular supply of medicines in sufficient quantity. Surveys conducted in 1998 and 2002 show almost no drop in diarrhoea incidence, indicating the continued need for attention to this important cause of child mortality, especially the availability of oral rehydration salts and other essential medicines for treatment, and improved capacity for management of childhood illness. Little progress has been achieved in improving maternal care beyond providing equipment to key health institutions due largely to limited funding and prioritization of other parts of the health programme. Women's health will need greater attention in the future.

UNICEF has provided therapeutic foods for the rehabilitation of severely malnourished children, vitamin A supplements, equipment and supplies for salt iodization, and technical assistance. In cooperation with the World Food Programme (WFP), UNICEF has also assisted the local production of fortified blended foods for children and women. Malnutrition rates have fallen from 1998 to 2002 roughly in line with the programme target of about 50 per cent. Low birth weight has declined by two thirds compared to the target of one half, although the reasons are not clear. The child stunting rate is, however, still very high, as is maternal malnutrition, indicating the need to do more to improve the care of women and young children. While vitamin A supplementation of children aged six months to five years has been very successful, the 2002 nutrition assessment found that only 33 per cent of mothers had received post-partum supplementation. Again this shows neglect of women's health and nutrition even though it is extremely influential to the growth and development potential of young children. Anaemia in women has apparently not fallen, although the samples in the two surveys are too small to draw definitive conclusions. Prenatal consultations, which cover many women, do not include systematic iron and folic acid supplementation. Universal salt iodization has not been achieved due to the limited salt refining capacity but a plan for achieving universal salt iodisation by end 2005, one of the "World Fit for Children" goals, has been agreed.

The water and environmental sanitation (WES) programme targeted wide coverage of a large number of child-care institutions and communities with very limited financial and technical resources. UNICEF supplies were spread very thinly. The 2001 annual review agreed to the need for a change of strategy for water supply to cover fully a limited number of focus counties (three in 2002 and a further two in 2003) and child-care institutions, as well as functioning pumping stations. Similarly, sanitation coverage was concentrated on focus counties, which has resulted in higher quality of service provision and national and local capacity building.

UNICEF provided paper for textbook production and basic school supplies. It also cooperated with the United Nations Educational, Scientific and Cultural Organization (UNESCO) in Education for All planning and promotion of an educational management information system. Limited funding forced hard prioritization of primary schools in the most vulnerable north-eastern provinces and kindergartens nationwide. The mid-term review (MTR) agreed that there was a need to integrate learning on HIV/AIDS prevention into the school curriculum. A much greater emphasis on improving quality of education will be needed in the future.

The programme information, monitoring and evaluation programme improved analysis and knowledge on the situation of children and women, increased awareness on the Convention on the Rights of the Child and better emergency preparedness. It also covered overall programme communication. UNICEF provided overseas training, equipment and technical assistance to the Central Bureau of Statistics, most visibly in the introduction of ChildInfo, software for the recording and dissemination of data on the situation of children and the successful implementation of the 2002 nutrition assessment. Conducted in collaboration with WFP, the Centre for International Child Health (London) and the Thailand Health Foundation (Bangkok), in addition to the quantitative information collected, the

assessment also provided much qualitative information through the random household visits that it entailed.

#### Lessons learned

A key lesson emphasized during annual reviews and the MTR, held in October 2002, has been the importance of strategic programming focus. UNICEF cooperation has continuously adjusted to target its relatively few resources in the face of great humanitarian needs. For example, in 2002, UNICEF reduced the range of essential medicines provided to a few of the most vital to ensure continuity of delivery rather than supplying a wider range of medicines for only a small part of the year. Since human resources are the foundation for all development, the Government and UNICEF have identified integrated early childhood development (ECD) as the area of highest priority. The MTR also concluded that although UNICEF capacity to respond to emergencies has recently improved, emergency preparedness could be developed further.

A further important lesson emphasized in reviews with the Government and in the conclusion of the Common Country Assessment (CCA) and situation analysis of children and women is the need to combine humanitarian action with moves towards development. With limited resources, few external partners and a continuing humanitarian imperative, there is little scope to take interventions to scale. Thus, UNICEF has sought ways to combine humanitarian assistance and development cooperation, for instance, through developing, in conjunction with WHO, the United Nations Population Fund (UNFPA) and IFRC, new standard medicine lists and treatment protocols in addition to providing the medicines themselves. In this context, through the WES programme in particular, the Government and UNICEF have identified the county as the most appropriate level to pilot innovations that can strengthen national planning in the social sector. Counties are relatively autonomous in terms of resources and decision-making, and are of manageable size for modeling development strategies and determining their replicability at an affordable cost. This will also help in planning larger-scale social development actions once financing for these becomes available.

## ARTICLE 4: Relationship of the programme of cooperation to national, international and UNICEF priorities

The Democratic People's Republic of Korea has no national medium-term development plan. However, this country programme of cooperation has been designed with the concerned government authorities and is harmonized with existing laws and policies pertaining to the rights of children and women. It also conforms and contributes to the aims of the National Program of Action for the Wellbeing of children, 2001-2010.

The programme is designed to help achieve the appropriate Millennium Development Goals to which the Democratic People's Republic of Korea is committed, as well as the goals of the United Nations General Assembly Special Session on Children as contained in the outcome document, "A World Fit for Children." It has been designed based on the findings of the Common Country Assessment and updated Analysis of the Situation of Children and Women in the Democratic People's Republic of Korea. It addresses directly four of the organizational priorities of the UNICEF medium-term strategic plan in areas where UNICEF cooperation has a clear comparative advantage. Linkages are explained in the articles below on country programme goals and strategies and programme objectives and descriptions. These are further elucidated in the annexed results matrix.

Three main focuses of the country programme – reduction of malnutrition, enhanced family and community child-care capacities, and improved collection and use of disaggregated data on children – respond to major comments of the Committee on the Rights of the Child.

### ARTICLE 5: Country programme goal, key results and strategy

The goal of the country programme is to contribute to improving children's and women's health and nutritional status and assuring that boys and girls are well educated so that by 2006: (a) infant, underfive and maternal mortality are reduced by one-quarter of their year 2000 levels; (b) stunting and maternal malnutrition are reduced by one fifth of their 2002 levels; and (c) all boys and girls complete kindergarten, primary and secondary schooling with appropriate learning levels. Achievement of these

results will be measured, *inter alia*, through the conduct of proposed multiple indicator cluster surveys (MICS) in 2004 and 2006.

The two main strategies adopted are the following. National capacity for service delivery and planning will be developed through a combination of training and technical assistance at the national level; continued support to key nationwide activities, such as immunization and supplies to provincial hospitals; and integrated multisectoral action in 10 focus (rural) counties and (urban) districts <sup>1</sup> to develop new, more efficient and effective approaches for comprehensive care of young children and women and improved quality of education. Focus counties / districts will be identified on the basis of their additional vulnerability. It is envisaged that multisectoral action will be initiated in three focus counties in 2004 with expansion, largely determined by progress, to 10 counties/districts in 2006. Focus county/district experience will feed back into national policy review. The majority of regular and other resources will be devoted to this strategy. At the same time, through the consolidated appeals process, essential humanitarian assistance will continue to be provided to maintain basic health and education services and to provide for some improvement in drinking water supply and sanitation. Critical shortfalls in emergency funding may necessitate reallocation of regular resources and regular other resources.

The country programme will be implemented through five programmes, incorporating both regular and emergency elements, and one support programme to cover cross-sectoral costs that are not attributable to the other individual programmes.

#### ARTICLE 6: Programme objectives and descriptions

The objectives and implementation strategies of the programmes and projects included in this country programme will be as described below. Key results, indicators, means of verification, partnerships and linkages to global goals are also shown in a summary results matrix annexed and integral to this Master Plan of Operations. A full logical framework for each of the programmes is also annexed.

#### Nutrition and care

This programme will help to facilitate the optimal growth and development of young children by enhancing the quality and quantity of care for women, as a key determinant of early childhood development, and promoting improved family, community and institutional capacity to provide care for children. In conjunction with the health services programme, it will also address micronutrient deficiencies that constrain the growth and development of children and the well-being of women. Key

<sup>1</sup> The Democratic People's Republic of Korea comprises 9 provinces and 3 municipalities, subdivided into 206 counties and districts.

results sought are that: (a) by 2006, 10 focus counties/districts in 6 provinces and 2 municipalities will operate a new strategy for improved family and institutional care of young children and pregnant/nursing mothers, with sustained reduction in malnutrition and a plan to go to national scale; and (b) by 2005, all households will use iodized salt (c) during 2004-2006, all children and women receive adequate intake of critical micronutrients through supplementation and food fortification.

The care for children and women project will support the promotion of a range of feeding and care practices, including micronutrient supplementation, for young children and pregnant and nursing mothers. Parental involvement in village/neighbourhood nurseries and parents' education will be key features. The primary facilitators of this process will be staff of the *ri/dong* (small administrative entities within counties/districts in rural/urban areas, respectively) clinics/hospitals and of nurseries. Strategies for this will be developed and implemented in the focus counties and districts, ensuring that the results are used in the formulation of a national policy and plan of action on ECD. The caring and learning capacity of workers in nurseries in focus areas will be strengthened to improve the psychosocial development of children being cared for in those institutions, as well as ways found to strengthen family care. At the national level, the Department for Guidance of Nurseries and the Institute of Child Nutrition, along with other sections of Ministry of Public Health, will provide technical and managerial support. UNICEF will also continue to collaborate with WFP for the local production and distribution of fortified complementary foods for young children and pregnant/nursing mothers.

The *micronutrients* project will support ongoing policy development and enhanced production of iodized salt to provide for universal coverage. Studies will look into more sustainable strategies for micronutrient food fortification and supplementation. This will be implemented by the Ministry of Public Health and the Institute of Child Nutrition, and for salt production, by the State Planning Commission.

The programme will be managed by Ministry of Public Health, with technical input from the departments mentioned above. The Health Education Institute and the Grand People's Study House will provide specialized support for communication activities. The Democratic Women's Union will facilitate educational activities for women and collaborate in advocacy. Caritas-Hong Kong and Save the Children (United Kingdom) are anticipated partners in the provision of support to nurseries and clinics.

Regular resources will be used for technical assistance and other resources mostly for support to salt iodization and for supplies. Fortified food production will be financed through CAP.

#### Health services

This programme will strengthen the health system's capacity to address the most common causes of mortality in children and women. Key results sought are that: (a) by 2006, the immunization coverage rate is raised to above 90 per cent, in all districts, for all antigens and the vitamin A supplementation rate is maintained at above 95 per cent; (b) during 2004-2006, all provincial paediatric hospitals correctly and adequately provide rehabilitation for severely malnourished children, with referrals from county hospitals fully functioning by 2006, and all health institutions correctly and adequately treat all cases of childhood diarrhoea and ARI; and (c) by 2006, maternity hospitals in 6 provinces and 2 municipalities provide adequate emergency obstetric care, with stabilization and referral operational in 10 focus county/district hospitals, and a plan to go to national scale is developed.

The *immunization plus* project will continue to facilitate the conduct of regular immunization of infants and pregnant women nationwide, including the elimination of neonatal tetanus. Special attention will be given to strengthening the cold chain, improved injection safety, expanded disease surveillance and to extending cooperation with the Global Alliance for Vaccines and Immunization and other potential sources of funding for sustainability of immunization. Although the NIDs for polio eradication ceased at the end of 2002, the project will continue to operate national health days for vitamin A supplementation of young children and other appropriate interventions. UNICEF will collaborate with WHO in all aspects of the project. Vitamin A capsules and technical support will be funded from other resources and vaccines and equipment from other resources and through CAP. Regular resources will be reserved for advocacy and capacity-building.

Through the *maternal and child health* project, in collaboration with WHO, UNFPA and IFRC, the quality of health services available to children and women will be enhanced through implementation of

the Integrated Management of Childhood Illness approach and through improvements to referral services for obstetric emergencies. Support will include training for health personnel, including section doctors, the production of relevant manuals and the appropriate supply of equipment. It will operate especially in the 10 focus counties/districts in order to garner experience for the overall national health policy. The project will also provide support for the rehabilitation of severely malnourished children in all 12 provincial paediatric hospitals. All of this will be underpinned by continuing support to the provision and distribution of essential medicines. As in the past, the focus will be on the continuity of supply, adjusting the range of medicines to available funding and assuring necessary improvements in in-country logistics. In order to begin to foster greater sustainability, the project will facilitate cooperation for the restoration of the country's capacity to produce the most essential drugs locally. Regular resources will be used for advocacy and capacity-building. All supplies and technical support will be funded from other resources and through CAP.

The programme will be managed by the Ministry of Public Health. The Health Education Institute and the Grand People's Study House will provide specialized support for communication activities.

#### Water and environmental sanitation (WES)

This programme will focus on improvements in the physical environment of children and women in order to prevent common diseases such as diarrhoea and skin infections. With vast needs and limited resources, most interventions will necessarily be constrained geographically to the focus counties/districts. Key results sought are that by 2006: 80 per cent of households and all child-care institutions in 10 focus counties/districts have access to drinking water of adequate quantity and quality; proper sanitation facilities are installed in all child-care institutions and households in the 10 focus counties/districts; and provincial WES improvement plans are developed in six provinces.

The focus counties WES project will rehabilitate complete piped water systems, the most common water supply system in the country, progressively covering 10 whole counties/districts. With the lessons learned from these focus counties, province-wide water supply improvement proposals will be prepared for later larger-scale funding. At the same time, key child-care institutions (such as baby homes, nurseries, schools, hospitals) will receive rehabilitation of bathrooms and latrines, and, where technically appropriate, borewells to assure an independent source of water. In conjunction with the care for children and women project, this project will also promote hygiene and sanitation among families in focus counties. Local city management and health authorities will be provided with supplies and equipment to monitor water quality. Regular resources will be used for advocacy and training, and other resources for technical support, capacity-building and some supplies, with other supplies funded through CAP.

The *emergency water supply rehabilitation* project will continue to provide disinfectants and spare parts to functioning water treatment stations and for emergency support for areas affected by natural disasters. This project will be funded through CAP.

The programme will be managed by the Ministry of City Management, in conjunction with the Ministry of Public Health anti-epidemic stations for water quality testing and hygiene education. The Health Education Institute and the Grand People's Study House will provide specialized support for communication activities. Cooperation will be fostered with IFRC and European non-governmental organizations that also provide assistance in the WES sector.

#### Education

This programme will maintain participation in and improve the quality of the country's system of free and compulsory education. Key results include: during 2004-2006, all boys and girls in the three most vulnerable provinces and in kindergartens nationwide will receive textbooks and basic school supplies; by 2006, 10 focus counties/districts will implement school physical and quality improvement plans, with a plan developed to take this to national scale; and by 2006, all schools nationwide will provide learning for children on child rights and HIV/AIDS.

The programme will continue to provide essential school supplies and paper and ink for the printing of textbooks. At the same time, in conjunction with UNESCO, it will address issues of quality of education, flagged by the Government as a priority area. The programme will help to formulate the

national plan of action for education for all and implementation strategies. In focus counties/districts, the national plan will be translated to a local school improvement plan, and support will be given to improve the physical environment of the school (such as water and sanitation), teaching methods, learner assessment and school-community interaction. This will enhance efficiency and child-friendliness, especially to maintain attendance, in both schools and kindergartens. Nationally, the programme will support the development of an educational management information system to be used as a primary tool to plan educational services for children. The programme will also assure that children receive essential information and learning on child rights and prevention of HIV/AIDS. Regular resources will fund advocacy on educational quality. Other resources will be used for technical support and capacity-building. Most supplies will be funded through CAP.

The programme will be managed by the Ministry of Education. The Ministry of City Management will provide support for water supply and sanitation in schools and kindergartens. In addition to UNESCO, WHO and the Joint United Nations Programme on HIV/AIDS will collaborate on HIV/AIDS prevention.

#### Planning and advocacy

This programme will strengthen information-based planning systems responsive to the situation of children and women, and will be the focal point for emergency preparedness. Key results sought by 2006 include: children's situation and National Plan of Action (NPA) targets are fully tracked in six provinces and two municipalities; and NPA targets are reviewed and updated based on progress. The programme will support further development of ChildInfo to track key indicators on the situation of children and women, and will produce an annual assessment of progress in implementing the NPA. Special support will be provided in focus counties/districts. In 2004 and 2006, this will be supplemented by MICS, and specific research topics may also be supported. The information and analysis generated will be used to improve social sector planning and monitoring and to track the progress of the country programme. This programme will support regular monitoring and evaluation of the country programme through the Integrated Monitoring and Evaluation Plan (IMEP). Regular resources will be used for technical support and capacity-building, while other resources will provide for supplies and equipment and some additional capacity-building.

The programme will be managed by the Central Bureau of Statistics, in conjunction with the National Coordinating Committee for UNICEF, the State Planning Commission and line ministries. Close collaboration will be maintained with planning and advocacy activities supported by UNDP, WHO and UNFPA.

#### ARTICLE 7: Programme management

The Democratic People's Republic of Korea National Coordinating Committee for UNICEF, comprising all government authorities associated with the country programme, is responsible for overall programme coordination. Responsibilities for management of each of the programmes rest with the following government authorities:

Nutrition and care: Ministry of Public Health
Health services: Ministry of Public Health
Water & environmental sanitation: Ministry of City Management
Education: Ministry of Education
Planning & advocacy: Central Bureau of Statistics

For each project, a Government official will be designated who, working with the designated UNICEF counterpart, will have overall responsibility for planning, managing and monitoring project activities.

The Government and UNICEF shall jointly conduct annual planning and review meetings for all programmes covered by this Master Plan of Operations in the last quarter of each year. Mid-year reviews by programme will be held at the end of the second quarter or beginning of the third quarter of each year. Other UN agencies and representatives of multilateral and bilateral donors shall be invited to participate in these meetings as appropriate.

Annual project plans of action (PPAs) prepared jointly by the Government and UNICEF, in collaboration with other appropriate partners, will detail the annual results sought from programme cooperation, activities to be carried, responsible implementing institutions, timeframes and planned inputs from the Government and UNICEF. The PPAs will be formulated in the last quarter of each year, endorsed by the annual planning and review meeting and signed by the Government and UNICEF at the beginning of the implementing year. The PPAs are the basis for the Government to request disbursements, supplies and services from UNICEF.

#### ARTICLE 8: Coordination with other development partners

The country programme will be implemented in close collaboration with other United Nations agencies and members of the Humanitarian and Development Working Group in the Democratic People's Republic of Korea in support of the consolidated appeals process and progress towards the Millennium Development Goals. Funding partners will be closely involved both to maximize resources and to profit from their substantive input into programme reviews and assessments, including facilitation of project visits for donors and National Committees for UNICEF.

Specific partnerships pertaining to individual programmes and projects have been noted in Article 6.

#### ARTICLE 9: Monitoring and evaluation

The country programme will be monitored and evaluated according to the provisions of the integrated monitoring and evaluation plan annexed and integral to this Master Plan of Operations.

Regular joint field visits will be undertaken by Government and UNICEF staff for the purpose of monitoring the end use of programme assistance, assessing progress and collecting information for programme and project development, monitoring and evaluation.

Mid-year and annual reviews will focus on monitoring provision of inputs, availability and expenditure of programme funds, and achievement of annual results, as specified in the annual Project Plans of Action. Annual assessments of progress will also be organized in each of the focus counties and districts with the participation of the local authorities.

To help assess the impact of programme activities and update knowledge on the situation of children, multiple indicator cluster surveys are proposed in 2004 and 2006. In addition, periodic reviews will be carried out in focus counties and districts.

The national database on children will be further developed utilizing ChildInfo software. Similar local databases will be developed for focus counties and districts.

Major reviews will be made in 2004 of the focus and impact of humanitarian action and in 2005 of the progress in the focus county strategy. These will contribute to the preparation of an updated analysis of the situation of children and women in the Democratic People's Republic of Korea to be prepared in 2005, in anticipation of the updating of the United Nations Common Country Assessment and as an initial step towards the preparation of a new country programme to begin in 2007.

#### ARTICLE 10: Commitments of UNICEF

The UNICEF Executive Board has approved a total commitment not exceeding the equivalent of US\$ 3,310,000 from UNICEF Regular Resources, subject to availability of funds, to support the activities detailed in this Master Plan of Operations, for the period beginning 1 January 2004 and ending 31 December 2006.

The UNICEF Executive Board has also authorized UNICEF to seek additional funding to the programmes specified in this Master Plan of Operations, referred to therein as Other Resources, to an amount equivalent to US\$ 9,000,000. The availability of these funds will be subject to donor interest in proposed projects. To this end, UNICEF will undertake to advocate their support within the local and international donor community.

The initial allocation of these Regular Resources (RR) and Other Resources (OR) by programme and by year will be as follows:

| PROGRAMME                        | FUNDING   |       | AMOUNT (US | \$ thousands) |        |
|----------------------------------|-----------|-------|------------|---------------|--------|
|                                  | SOURCE    | 2004  | 2005       | 2006          | TOTAL  |
| Nutrition & care                 | RR        | 500   | 500        | 500           | 1,500  |

Note: The amounts shown in the table above are ceiling estimates, subject to the availability of funds.

The above funding commitments and proposals are exclusive of funding received in response to emergency appeals, which may be launched by the Government or by the United Nations System in response to a Government request.

UNICEF support to the development and implementation of activities within this Master Plan of Operations may include technical support, cash assistance, supplies and equipment, procurement services on behalf of the Government, transport, funds for advocacy, research and studies, consultancies, programme development, monitoring and evaluation, training activities, and staff support. Part of UNICEF support may be provided to non-governmental organizations as agreed within the framework of the individual programmes.

UNICEF shall appoint project staff and consultants for programme development, programme support, technical assistance and monitoring and evaluation activities.

Subject to annual reviews and progress in the implementation of the country programme, UNICEF funds are distributed by calendar year and in accordance with the Master Plan of Operations. These budgets will be reviewed and further detailed in the annual Project Plans of Action. By mutual consent between the Government and UNICEF, if the rate of implementation in any project is substantially below the annual estimates, funds not earmarked by donors to UNICEF for specific projects may be reallocated to other programmatically equally worthwhile projects that are expected to achieve faster rates of execution.

UNICEF will consult with ministries and agencies concerned on timely requisition of cash assistance, supplies and equipment, or services. UNICEF will keep concerned officials informed of the movement of commodities, in order to facilitate efficient and timely clearing, warehousing and distribution.

In consultation with the National Coordinating Committee, UNICEF maintains the right to request a joint review of the use of commodities supplied but not used for the purposes specified in this Master Plan of Operations and annual Project Plans of Action, for the purpose of reprogramming those commodities within the framework of the Master Plan of Operations.

#### ARTICLE 11: Commitments of the Government

The Government will provide all personnel, premises, supplies, technical assistance and funds, recurring and non-recurring support necessary for the country programme, except as provided by UNICEF and/or other United Nations agency, international organizations or bilateral agencies, or non-governmental organizations.

The Government will support UNICEF's efforts to raise funds required to meet the financial needs of the country programme and will cooperate with UNICEF by: encouraging potential donor governments to make available to UNICEF the funds needed to implement the unfunded components of the country programme; endorsing UNICEF's effort to raise funds for the programme from the private sector both internationally and in the Democratic People's Republic of Korea; and by permitting contributions from individuals, corporations and foundations in the Democratic People's Republic of Korea to support this country programme, which shall be tax exempt.

In accordance with the Basic Cooperation Agreement, the Government will be responsible for the clearance, receipt, warehousing, distribution and accounting of supplies and equipment made available by UNICEF. No taxes, fees, tolls or duties shall be levied on supplies, equipment or services furnished by UNICEF under this Master Plan of Operations, whether procured in the Democratic People's Republic of Korea or imported from other countries.

With respect to cash assistance from UNICEF, the Government shall designate the names, titles and account details of recipients authorized to receive such assistance. Responsible officials will utilize cash assistance in accordance with Government regulations and UNICEF regulations and rules, in particular ensuring that cash is expended against prior approved budgets and ensuring that full reports on proper utilization of cash assistance are submitted to UNICEF within six months after receipt of the funds. Any balance of funds unutilized or which could not be used according to the original plan shall be reprogrammed by mutual consent between the Government and UNICEF. Cash assistance for travel, stipends, honoraria and other costs shall be set at rates commensurate with those applied in the country, but not higher than those applicable to the United Nations System, as stated in International Civil Service Commission circulars.

The Government shall facilitate periodic visits to project sites and observation of programme activities for UNICEF officials.

When organizing periodic programme review and planning meetings, including annual reviews, the Government shall encourage and facilitate the participation of donors, United Nations agencies, members of the UNICEF Executive Board and non-governmental organizations, as appropriate.

The Government will authorize the publication through various national and international media of the results of the country programme and experiences derived therefrom.

As per the provisions of the Basic Cooperation Agreement, the Government will be responsible for dealing with any claims, which may be brought by third parties against UNICEF and its officials, advisers and agents. UNICEF and its official, advisers and agents will not be held responsible for any claims and liabilities resulting from operations under this agreement, except where it is mutually agreed by the Government and UNICEF that such claims and liabilities arise from gross negligence or misconduct of such advisers, agents or employees.

#### ARTICLE 12: Final provisions

This Master Plan of Operations shall supersede any previously signed Master Plan of Operations and become effective on signature, but will be understood to cover programme activities to be implemented during the period from 1 January 2004 to 31 December 2006.

The Master Plan of Operations may be modified by mutual consent in writing of the Government and UNICEF, based on the outcome of annual reviews or compelling circumstances.

Nothing in this Master Plan of Operations shall in any way be construed to waive the protection of UNICEF accorded by the contents and substance of the Convention on Privileges and Immunities of the United Nations adopted by the General Assembly of the United Nations on 13 February 1946, to with the Government of the Democratic People's Republic of Korea is a signatory.

IN WITNESS THEREOF the undersigned, being duly authorized, have signed this Master Plan of Operations on the 20th day of January 2004 in Pyongyang, Democratic People's Republic of Korea.

For the Government of the Democratic People's For the United Nations Children's Fund Republic of Korea

Ri Hung Sik Secretary-General Pierrette Vu Thi Representative

ANNEXES: Summary results matrix

Integrated monitoring and evaluation plan

Programme results frameworks

## PART 2

#### **SUMMARY RESULTS MATRIX**

Country programme strategic intent: Children and women's health and nutritional status is improved; boys and girls are well educated.

Key results/indicators: By 2006:

Infant, under-five and maternal mortality reduced by one quarter of 2000 levels

Stunting and maternal malnutrition reduced by one-fifth of 2002 levels

All boys and girls complete kindergarten, primary and secondary schooling with appropriate learning levels.

**Key mean of verification:**• Multiple indicator cluster surveys (by province/municipality) in 2004 and 2006.

Educational management information system.

Annual national and provincial reviews.

Overall strategies: National capability improved for service delivery and planning.

Provision of essential humanitarian assistance, including disaster preparedness planning (through the annual

consolidated appeals process).

Coordinating authority: DPRK National Coordinating Committee for UNICEF.
